Datasheet for ABIN3737956

# Human F7 shRNA in Retroviral Vector (GFP tag)

## Overview

| | |
|---|---|
| Quantity: | 1 kit |
| Gene: | Factor VII (F7) |
| Species: | Human |
| Fusion tag: | GFP tag |
| Insert: | shRNA |
| Vector: | Retroviral Vector |
| Application: | RNA Interference (RNAi) |

## Product Details

| | |
|---|---|
| Purpose: | Pre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-down of Human F7. |
| Brand: | HuSH-29™ |
| Vector Backbone: | pGFP-V-RS |
| Promoter: | U6 Promoter |
| Selectable Marker: | Puromycin |
| Bacterial Resistance: | Kanamycin |
| Expression Type: | Transient, Stable |
| Specificity: | • The HuSH shRNA gene-specific expression cassettes were optimized to include both the termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors.<br>• One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved. |
| Characteristics: | • The shRNA gene-specific expression cassettes are prepared using synthetic |

## Product Details

| | |
|---|---|
| | oligonucleotides.<br>• These oligonucleotide sequences were computer designed for optimal suppression of gene expression and minimal off-target effects.<br>• All shRNA sequences are verified through DNA sequencing analysis. |
| Components: | • Gene-specific shRNA in pGFPC-shLenti vector, 4 unique constructs per gene, 5 ug per vial.<br>• HuSH 29-mer Scrambled in pGFP-C-shLenti 5 ug plasmid DNA. |

## Target Details

| | |
|---|---|
| Gene: | Factor VII (F7) |
| Alternative Name: | F7 (F7 Products) |

## Application Details

| | |
|---|---|
| Application Notes: | • Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection.<br>• To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.. |
| Restrictions: | For Research Use only |

## Handling

| | |
|---|---|
| Format: | Lyophilized |
| Storage: | 4 °C/-20 °C |
| Storage Comment: | The dried plasmids can be stored at 4°C. However, once reconstituted with dH2O, the plasmids must be stored at -20°C. |
