Human PSG7 cDNA Clone in Mammalian Expression Vector

Overview	
Quantity:	10 μg
Gene:	PSG7
Species:	Human
Insert:	cDNA
Vector:	Mammalian Expression Vector
Application:	Protein Expression (PExp)
Product Details	
Purpose:	Untagged full-length cDNA clone from Human PSG7 is ideal for over-expression of native
	protein for functional studies.
Brand:	TrueClones®
Vector Backbone:	pCMV6-Entry
Promoter:	Enhanced CMV Promoter
Selectable Marker:	Neomycin
Bacterial Resistance:	Kanamycin
Expression Type:	Transient
Specificity:	With the native stop codon at the end of the ORF the C-terminal Myc-DDK tag in the vector won't be expressed.
Characteristics:	 These cDNA clones are isolated from full-length cDNA libraries and usually contain the coding sequence as well as the untranslated regions (UTRs) of the mRNA transcript appropriate to the library from which they were isolated. These cDNA clones are ideal for over-expression of native proteins for functional studies. Provided as 10 µg transfection-ready plasmids. Every lot of primer is tested to provide clean sequencing of cDNA clones.

Product Details Purification: The DNAs were purified using PowerPrep HP Plasmid isolation kits for transfection ready plasmids. Sequencing Primer: VP1.5 (forward) 5'GGACTTTCCAAAATGTCG 3', XL39 (reverse) 5'ATTAGGACAAGGCTGGTGGG • The cDNA clone is shipped in a 2-D bar-coded Matrix tube as dried plasmid DNA. Components: • The package also includes 100 pmols of both the corresponding 5' and 3' vector primers in separate vials. **Target Details** Gene: PSG7 Alternative Name: PSG7 (PSG7 Products) Background: This gene is a member of the pregnancy-specific glycoprotein (PSG) gene family. The PSG genes are a subgroup of the carcinoembryonic antigen (CEA) family of immunoglobulin-like genes, and are found in a gene cluster at 19q13.1-q13.2 telomeric to another cluster of CEArelated genes. The PSG genes are expressed by placental trophoblasts and released into the maternal circulation during pregnancy, and are thought to be essential for maintenance of normal pregnancy. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Feb 2014]. Transcript Variant: This variant (1) represents the longer transcript and encodes the longest isoform (1). This version of transcript variant 1 represents the proteincoding minority allele. A second version of transcript variant 1 represents the major allele of this polymorphic locus with a mismatch compared to the reference genome sequence. NCBI Accession: NM_002783, NP_002774 **Application Details** Restrictions: For Research Use only Handling Format: Lyophilized RT,-20 °C Storage:

The lyophilized plasmid is stable for up to one year when stored at ambient temperature.

Following dissolution in 100 μ L dH2O, store at -20 °C. Lyophilized primers are stable for up to

one year when stored at ambient temperature. Following dissolution in 10 µL dH20, store at -20

Storage Comment:

Handling °C. Expiry Date: 12 months Publications Product cited in: Johnson, Drugan, Miller, Evans: "38" in: , Vol. 1363, Issue Nucleic acids research, pp. 28-39, (1991)
