Expression Type:	Transient
Specificity:	With the native stop codon at the end of the ORF the C-terminal Myc-DDK tag in the vector won't be expressed.
Characteristics:	<ul style="list-style-type: none"> • These cDNA clones are isolated from full-length cDNA libraries and usually contain the coding sequence as well as the untranslated regions (UTRs) of the mRNA transcript appropriate to the library from which they were isolated. • These cDNA clones are ideal for over-expression of native proteins for functional studies. Provided as 10 µg transfection-ready plasmids. • Every lot of primer is tested to provide clean sequencing of cDNA clones.

Target Details

Gene:	CLLU1
Alternative Name:	CLLU1 (CLLU1 Products)
Background:	The protein encoded by this gene is overexpressed in chronic lymphocytic leukemia (CLL) and serves as a good prognostic marker for the disease. Methylation of certain genes, including this one, have been associated with CLL. This gene is protein-coding in humans and non-protein coding in other primates. Three transcript variants, one protein-coding and the other two non-protein coding, have been found for this gene. [provided by RefSeq, Nov 2015]. Transcript Variant: This variant (1) represents the longest transcript and is protein-coding.
NCBI Accession:	NM_001025233 , NP_001020404
