Human NBPF12 cDNA Clone in Mammalian Expression Vector

Overview	
Quantity:	10 μg
Gene:	NBPF12
Species:	Human
Insert:	cDNA
Vector:	Mammalian Expression Vector
Application:	Protein Expression (PExp)
Product Details	
Purpose:	Untagged full-length cDNA clone from Human NBPF12 is ideal for over-expression of native protein for functional studies.
Brand:	TrueClones®
Vector Backbone:	pCMV6-Entry
Promoter:	Enhanced CMV Promoter
Selectable Marker:	Neomycin
Bacterial Resistance:	Kanamycin
Expression Type:	Transient
Specificity:	Restriction Site: Sgfl-Mlul. With the native stop codon at the end of the ORF the C-terminal Myc-DDK tag in the vector won't be expressed.
Characteristics:	 These cDNA clones are isolated from full-length cDNA libraries and usually contain the coding sequence as well as the untranslated regions (UTRs) of the mRNA transcript appropriate to the library from which they were isolated. These cDNA clones are ideal for over-expression of native proteins for functional studies. Provided as 10 µg transfection-ready plasmids. Every lot of primer is tested to provide clean sequencing of cDNA clones.

Product Details Purification: The DNAs were purified using PowerPrep HP Plasmid isolation kits for transfection ready plasmids. Sequencing Primer: VP1.5 (forward) 5'GGACTTTCCAAAATGTCG 3', XL39 (reverse) 5'ATTAGGACAAGGCTGGTGGG • The cDNA clone is shipped in a 2-D bar-coded Matrix tube as dried plasmid DNA. Components: • The package also includes 100 pmols of both the corresponding 5' and 3' vector primers in separate vials. **Target Details** Gene: NBPF12 Alternative Name: NBPF12 (NBPF12 Products) Background: This gene is a member of the neuroblastoma breakpoint family (NBPF) which consists of dozens of recently duplicated genes primarily located in segmental duplications on human chromosome 1. This gene family has experienced its greatest expansion within the human lineage and has expanded, to a lesser extent, among primates in general. Members of this gene family are characterized by tandemly repeated copies of DUF1220 protein domains. Gene copy number variations in the human chromosomal region 1q21.1, where most DUF1220 domains are located, have been implicated in a number of developmental and neurogenetic diseases such as microcephaly, macrocephaly, autism, schizophrenia, mental retardation, congenital heart disease, neuroblastoma, and congenital kidney and urinary tract anomalies. Altered expression of some gene family members is associated with several types of cancer. This gene family contains numerous pseudogenes. [provided by RefSeq, May 2013]. NCBI Accession: NM_001278141, NP_001265070 **Application Details** Restrictions: For Research Use only Handling Lyophilized Format: RT,-20 °C Storage: Storage Comment: The lyophilized plasmid is stable for up to one year when stored at ambient temperature.

Following dissolution in 100 µL dH20, store at -20 °C. Lyophilized primers are stable for up to

Handling one year when stored at ambient temperature. Following dissolution in 10 μL dH2O, store at -20 °C. Expiry Date: 12 months Publications Product cited in: Johnson, Drugan, Miller, Evans: "38" in: , Vol. 1363, Issue Nucleic acids research, pp. 28-39, (1991)
