Datasheet for ABIN3653866
Human KIAA2018 shRNA in Retroviral Vector

## Overview

| Quantity: | 1 kit |
| :--- | :--- |
| Gene: | USF3 (KIAA2018) |
| Species: | Human |
| Insert: | shRNA |
| Vector: | Retroviral Vector |
| Application: | RNA Interference (RNAi) |

Product Details

| Purpose: | Pre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-down of <br> Human KIAA2018. |
| :--- | :--- |
| Brand: | HuSH-29m" |
| Vector Backbone: | pRS |
| Promoter: | U6 Promoter |
| Selectable Marker: | Ampicillin |
| Bacterial Resistance: | Transient, Stable |
| Expression Type: | The HuSH shRNA gene-specific expression cassettes were optimized to include both the <br> termination signal for RNA Pol III and GC content targeted at $50 \%$ to further improve the <br> quality of the gene-specific shRNA expression vectors. |
| Specificity: | One of the four constructs at minimum are guaranteed to produce $70 \%$ or more gene <br> expression knock-down provided a minimum transfection efficiency of $80 \%$ is achieved. |
| Characteristics: | The shRNA gene-specific expression cassettes are prepared using synthetic <br> oligonucleotides. |

expression and minimal off-target effects.

- All shRNA sequences are verified through DNA sequencing analysis.

Components:

- Gene-specific shRNA expression pRS vectors, 5 ug plasmid DNA per vial.
- Four unique constructs per gene.
- HuSH 29-mer NonEffective Scrambled pRS 5 ug plasmid DNA.

Target Details

| Gene: | USF3 (KIAA2018) |
| :---: | :---: |
| Alternative Name: | KIAA2018 |
| Application Details |  |
| Application Notes: | - Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. <br> - To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.. |
| Restrictions: | For Research Use only |
| Handling |  |
| Format: | Lyophilized |
| Storage: | $4^{\circ} \mathrm{C} /-20^{\circ} \mathrm{C}$ |
| Storage Comment: | The dried plasmids can be stored at $4^{\circ} \mathrm{C}$. However, once reconstituted with dH 2 O , the plasmids must be stored at $-20^{\circ} \mathrm{C}$. |
