

Datasheet for ABIN3655105 Human ERVK-6 shRNA in Retroviral Vector

Overview

| | |
|--------------|-------------------------|
| Quantity: | 1 kit |
| Gene: | ERVK-6 |
| Species: | Human |
| Insert: | shRNA |
| Vector: | Retroviral Vector |
| Application: | RNA Interference (RNAi) |

Product Details

| | |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Purpose: | Pre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-down of Human ERVK6. |
| Brand: | HuSH-29™ |
| Vector Backbone: | pRS |
| Promoter: | U6 Promoter |
| Selectable Marker: | Puromycin |
| Bacterial Resistance: | Ampicillin |
| Expression Type: | Transient, Stable |
| Specificity: | <ul style="list-style-type: none"> The HuSH shRNA gene-specific expression cassettes were optimized to include both the termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved. |
| Characteristics: | <ul style="list-style-type: none"> The shRNA gene-specific expression cassettes are prepared using synthetic oligonucleotides. These oligonucleotide sequences were computer designed for optimal suppression of gene |

Product Details

- expression and minimal off-target effects.
- All shRNA sequences are verified through DNA sequencing analysis.

- Components:
- Gene-specific shRNA expression pRS vectors, 5 ug plasmid DNA per vial.
 - Four unique constructs per gene.
 - HuSH 29-mer NonEffective Scrambled pRS 5 ug plasmid DNA.
 - .

Target Details

- Gene: ERVK-6
- Alternative Name: ERVK6 ([ERVK-6 Products](#))

Application Details

- Application Notes:
- Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection.
 - To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples..

- Restrictions: For Research Use only

Handling

- Format: Lyophilized
- Storage: 4 °C/-20 °C
- Storage Comment: The dried plasmids can be stored at 4°C. However, once reconstituted with dH2O, the plasmids must be stored at -20°C.
