Datasheet for ABIN3678225 Mouse IgG3 shRNA in Retroviral Vector (RFP tag)

Overview

Quantity:	1 kit
Gene:	lgG3
Species:	Mouse
Fusion tag:	RFP tag
Insert:	shRNA
Vector:	Retroviral Vector
Application:	RNA Interference (RNAi)

Product Details

Purpose:	Pre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-down of
	Mouse (Murine) Al324046.
Brand:	HuSH-29™
Vector Backbone:	pRFP-C-RS
Promoter:	U6 Promoter
Selectable Marker:	Puromycin
Bacterial Resistance:	Chloramphenicol
Expression Type:	Transient, Stable
Specificity:	The HuSH shRNA gene-specific expression cassettes were optimized to include both the
	termination signal for RNA Pol III and GC content targeted at 50 % to further improve the
	quality of the gene-specific shRNA expression vectors.
	One of the four constructs at minimum are guaranteed to produce 70 % or more gene
	expression knock-down provided a minimum transfection efficiency of 80 % is achieved.
Characteristics:	The shRNA gene-specific expression cassettes are prepared using synthetic

	 oligonucleotides. These oligonucleotide sequences were computer designed for optimal suppression of gene expression and minimal off-target effects. All shRNA sequences are verified through DNA sequencing analysis.
Components:	 Gene-specific shRNA expression pRFP-C-RS vectors, 5 ug plasmid DNA per vial. Four unique constructs per gene. HuSH 29-mer NonEffective Scrambled pGFP-VRS 5 ug plasmid DNA.

Target Details

Gene:	lgG3
Alternative Name:	AI324046 (IgG3 Products)
Target Type:	Antibody
Application Details	
Application Notes:	 Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples
Restrictions:	For Research Use only
Handling	
Format:	Lyophilized
Storage:	4 °C/-20 °C
Storage Comment:	The dried plasmids can be stored at 4°C. However, once reconstituted with dH2O, the plasmids must be stored at -20°C.
