Datasheet for ABIN3698155 Mouse ZNF619 shRNA in Retroviral Vector (GFP tag)

Overview

Quantity:	1 kit
Gene:	ZNF619
Species:	Mouse
Fusion tag:	GFP tag
Insert:	shRNA
Vector:	Retroviral Vector
Application:	RNA Interference (RNAi)

Product Details

Mouse (Murine) Zfp619.Brand:HuSH-29 ^M Vector Backbone:pGFP-V-RSPromoter:U6 PromoterSelectable Marker:PuromycinBacterial Resistance:KanamycinExpression Type:Transient, StableSpecificity:• The HuSH shRNA gene-specific expression cassettes were optimized to include both th termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. • One of the four constructs at minimum are guaranteed to produce 70 % or more gene		
Brand:HuSH-29™Vector Backbone:pGFP-V-RSPromoter:U6 PromoterSelectable Marker:PuromycinBacterial Resistance:KanamycinExpression Type:Transient, StableSpecificity:The HuSH shRNA gene-specific expression cassettes were optimized to include both th termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. • One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved	Purpose:	Pre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-down of Mouse (Murine) Zfp619.
Vector Backbone:pGFP-V-RSPromoter:U6 PromoterSelectable Marker:PuromycinBacterial Resistance:KanamycinExpression Type:Transient, StableSpecificity:• The HuSH shRNA gene-specific expression cassettes were optimized to include both th termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. • One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved		
Promoter: U6 Promoter Selectable Marker: Puromycin Bacterial Resistance: Kanamycin Expression Type: Transient, Stable Specificity: • The HuSH shRNA gene-specific expression cassettes were optimized to include both th termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. • One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved	Brand:	HuSH-29™
Selectable Marker: Puromycin Bacterial Resistance: Kanamycin Expression Type: Transient, Stable Specificity: • The HuSH shRNA gene-specific expression cassettes were optimized to include both th termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. • One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved	Vector Backbone:	pGFP-V-RS
Bacterial Resistance: Kanamycin Expression Type: Transient, Stable Specificity: • The HuSH shRNA gene-specific expression cassettes were optimized to include both th termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. • One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved	Promoter:	U6 Promoter
Expression Type: Transient, Stable Specificity: • The HuSH shRNA gene-specific expression cassettes were optimized to include both th termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. • One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved	Selectable Marker:	Puromycin
 Specificity: The HuSH shRNA gene-specific expression cassettes were optimized to include both the termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved 	Bacterial Resistance:	Kanamycin
 termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved 	Expression Type:	Transient, Stable
One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved	Specificity:	• The HuSH shRNA gene-specific expression cassettes were optimized to include both the termination signal for RNA Pol III and GC content targeted at 50 % to further improve the
expression knock-down provided a minimum transfection efficiency of 80 % is achieved		quality of the gene-specific shRNA expression vectors.
		- One of the four constructs at minimum are guaranteed to produce 70 $\%$ or more gene
Characteristics: • The shRNA gene-specific expression cassettes are prepared using synthetic		expression knock-down provided a minimum transfection efficiency of 80 % is achieved.
	Characteristics:	The shRNA gene-specific expression cassettes are prepared using synthetic

Product Details	
	 oligonucleotides. These oligonucleotide sequences were computer designed for optimal suppression of gene expression and minimal off-target effects. All shRNA sequences are verified through DNA sequencing analysis.
Components:	 Gene-specific shRNA in pGFPC-shLenti vector, 4 unique constructs per gene, 5 ug per vial. HuSH 29-mer Scrambled in pGFP-C-shLenti 5 ug plasmid DNA.
Target Details	
Gene:	ZNF619
Alternative Name:	Zfp619 (ZNF619 Products)
Application Details	
Application Notes:	 Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.
Restrictions:	For Research Use only
Handling	
Format:	Lyophilized
Storage:	4 °C/-20 °C
Storage Comment:	The dried plasmids can be stored at 4°C. However, once reconstituted with dH2O, the plasmids must be stored at -20°C.
