Overview

Datasheet for ABIN3743792 Human LINC00158 shRNA in Retroviral Vector (GFP tag)

Human C21orf42.Brand:HuSH-29 [™] Vector Backbone:pGFP-V-RSPromoter:U6 PromoterSelectable Marker:PuromycinBacterial Resistance:KanamycinExpression Type:Transient, StableSpecificity:The HuSH shRNA gene-specific expression cassettes were optimized to include b termination signal for RNA Pol III and GC content targeted at 50 % to further impre- quality of the gene-specific shRNA expression vectors.		
Species: Human Fusion tag: GFP tag Insert: shRNA Vector: Retroviral Vector Application: RNA Interference (RNAi) Product Details Pre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-d Human C21orf42. Brand: HuSH-29" Vector Backbone: pGFP-V-RS Promoter: U6 Promoter Selectable Marker: Puromycin Bracterial Resistance: Kanamycin Expression Type: Transient, Stable Specificity: The HuSH shRNA gene-specific expression cassettes were optimized to include b termination signal for RNA Pol III and GC content targeted at 50 % to further improquality of the gene-specific shRNA expression vectors.	Quantity:	1 kit
Fusion tag:GFP tagInsert:shRNAVector:Retroviral VectorApplication:RNA Interference (RNAI)Product DetailsPre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-d Human C21orf42.Brand:HuSH-29 [™] Vector Backbone:pGFP-V-RSPromoter:U6 PromoterSelectable Marker:PuromycinBacterial Resistance:KanamycinExpression Type:Transient, StableSpecificity:• The HuSH shRNA gene-specific expression cassettes were optimized to include b termination signal for RNA Pol III and GC content targeted at 50 % to further impro- quality of the gene-specific shRNA expression vectors.	Gene:	C21orf42 (LINC00158)
Insert:shRNAVector:Retroviral VectorApplication:RNA Interference (RNAI)Product DetailsPre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-d Human C21orf42.Brand:HuSH-29 [™] Vector Backbone:pGFP-V-RSPromoter:U6 PromoterSelectable Marker:PuronycinBacterial Resistance:KanamycinExpression Type:Transient, StableSpecificity:• The HuSH shRNA gene-specific expression cassettes were optimized to include b termination signal for RNA Pol III and GC content targeted at 50 % to further impro- quality of the gene-specific shRNA expression vectors.	Species:	Human
Vector:Retroviral VectorApplication:RNA Interference (RNAI)Product DetailsPre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-d Human C21orf42.Brand:HuSH-29 ^m Vector Backbone:pGFP-V-RSPromoter:U6 PromoterSelectable Marker:PuromycinBacterial Resistance:KanamycinExpression Type:Transient, StableSpecificity:• The HuSH shRNA gene-specific expression cassettes were optimized to include b termination signal for RNA Pol III and GC content targeted at 50 % to further impro- quality of the gene-specific shRNA expression vectors.	Fusion tag:	GFP tag
Application:RNA Interference (RNAi)Product DetailsPurpose:Pre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-d Human C21orf42.Brand:HuSH-29"Vector Backbone:pGFP-V-RSPromoter:U6 PromoterSelectable Marker:PuromycinBacterial Resistance:KanamycinExpression Type:Transient, StableSpecificity:• The HuSH shRNA gene-specific expression cassettes were optimized to include b termination signal for RNA Pol III and GC content targeted at 50 % to further impro- quality of the gene-specific shRNA expression vectors.	Insert:	shRNA
Product Details Purpose: Pre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-d Human C21orf42. Brand: HuSH-29™ Vector Backbone: pGFP-V-RS Promoter: U6 Promoter Selectable Marker: Puromycin Bacterial Resistance: Kanamycin Expression Type: Transient, Stable Specificity: • The HuSH shRNA gene-specific expression cassettes were optimized to include b termination signal for RNA Pol III and GC content targeted at 50 % to further improgradulity of the gene-specific shRNA expression vectors.	Vector:	Retroviral Vector
Purpose:Pre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-d Human C21orf42.Brand:HuSH-29™Vector Backbone:pGFP-V-RSPromoter:U6 PromoterSelectable Marker:PuromycinBacterial Resistance:KanamycinExpression Type:Transient, StableSpecificity:• The HuSH shRNA gene-specific expression cassettes were optimized to include b termination signal for RNA Pol III and GC content targeted at 50 % to further impro- quality of the gene-specific shRNA expression vectors.	Application:	RNA Interference (RNAi)
Human C21orf42.Brand:HuSH-29"Vector Backbone:pGFP-V-RSPromoter:U6 PromoterSelectable Marker:PuromycinBacterial Resistance:KanamycinExpression Type:Transient, StableSpecificity:The HuSH shRNA gene-specific expression cassettes were optimized to include b termination signal for RNA Pol III and GC content targeted at 50% to further impre- quality of the gene-specific shRNA expression vectors.	Product Details	
Vector Backbone:pGFP-V-RSPromoter:U6 PromoterSelectable Marker:PuromycinBacterial Resistance:KanamycinExpression Type:Transient, StableSpecificity:• The HuSH shRNA gene-specific expression cassettes were optimized to include b termination signal for RNA Pol III and GC content targeted at 50 % to further impro- quality of the gene-specific shRNA expression vectors.	Purpose:	Pre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-down of Human C21orf42.
Promoter:U6 PromoterSelectable Marker:PuromycinBacterial Resistance:KanamycinExpression Type:Transient, StableSpecificity:• The HuSH shRNA gene-specific expression cassettes were optimized to include b termination signal for RNA Pol III and GC content targeted at 50 % to further impro- quality of the gene-specific shRNA expression vectors.	Brand:	HuSH-29™
Selectable Marker:PuromycinBacterial Resistance:KanamycinExpression Type:Transient, StableSpecificity:• The HuSH shRNA gene-specific expression cassettes were optimized to include b termination signal for RNA Pol III and GC content targeted at 50 % to further impro- quality of the gene-specific shRNA expression vectors.	Vector Backbone:	pGFP-V-RS
Bacterial Resistance: Kanamycin Expression Type: Transient, Stable Specificity: • The HuSH shRNA gene-specific expression cassettes were optimized to include b termination signal for RNA Pol III and GC content targeted at 50 % to further improquality of the gene-specific shRNA expression vectors.	Promoter:	U6 Promoter
Expression Type: Transient, Stable Specificity: • The HuSH shRNA gene-specific expression cassettes were optimized to include b termination signal for RNA Pol III and GC content targeted at 50 % to further improquality of the gene-specific shRNA expression vectors.	Selectable Marker:	Puromycin
 Specificity: The HuSH shRNA gene-specific expression cassettes were optimized to include b termination signal for RNA Pol III and GC content targeted at 50 % to further improquality of the gene-specific shRNA expression vectors. 	Bacterial Resistance:	Kanamycin
termination signal for RNA Pol III and GC content targeted at 50 % to further impro quality of the gene-specific shRNA expression vectors.	Expression Type:	Transient, Stable
	Specificity:	 The HuSH shRNA gene-specific expression cassettes were optimized to include both the termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved.

Characteristics:

• The shRNA gene-specific expression cassettes are prepared using synthetic

Product Details	
	 oligonucleotides. These oligonucleotide sequences were computer designed for optimal suppression of gene expression and minimal off-target effects. All shRNA sequences are verified through DNA sequencing analysis.
Components:	 Gene-specific shRNA in pGFPC-shLenti vector, 4 unique constructs per gene, 5 ug per vial. HuSH 29-mer Scrambled in pGFP-C-shLenti 5 ug plasmid DNA.
Target Details	
Gene:	C21orf42 (LINC00158)
Alternative Name:	C21orf42
Application Details	
Application Notes:	 Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.
Restrictions:	For Research Use only
Handling	
Format:	Lyophilized
Storage:	4 °C/-20 °C
Storage Comment:	The dried plasmids can be stored at 4°C. However, once reconstituted with dH2O, the plasmids must be stored at -20°C.
