## Human POTEM shRNA in Retroviral Vector (GFP tag)

Overview				
Quantity:	1 kit			
Gene:	POTEM			
Species:	Human			
Fusion tag:	GFP tag			
Insert:	shRNA			
Vector:	Retroviral Vector			
Application:	RNA Interference (RNAi)			
Product Details				
Purpose:	Pre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-down of Human P704P.			
Brand:	HuSH-29™			
Vector Backbone:	pGFP-V-RS			
Promoter:	U6 Promoter			
Selectable Marker:	Puromycin			
Bacterial Resistance:	Kanamycin			
Expression Type:	Transient, Stable			
Specificity:	<ul> <li>The HuSH shRNA gene-specific expression cassettes were optimized to include both the termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors.</li> <li>One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved.</li> </ul>			
Characteristics:	The shRNA gene-specific expression cassettes are prepared using synthetic			

## **Product Details** oligonucleotides. · These oligonucleotide sequences were computer designed for optimal suppression of gene expression and minimal off-target effects. · All shRNA sequences are verified through DNA sequencing analysis. • Gene-specific shRNA in pGFPC-shLenti vector, 4 unique constructs per gene, 5 ug per vial. Components: · HuSH 29-mer Scrambled in pGFP-C-shLenti 5 ug plasmid DNA. **Target Details** Gene: **POTEM** Alternative Name: P704P (POTEM Products) **Application Details** · Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA Application Notes: constructs 72 hrs post transfection. · To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.. For Research Use only Restrictions: Handling Format: Lyophilized 4 °C/-20 °C Storage:

Storage Comment:
