Datasheet for ABIN3765109 Human SCGB1C2 shRNA in Lentiviral Vector (GFP tag)

Overview

Quantity:	1 kit
Gene:	SCGB1C2
Species:	Human
Fusion tag:	GFP tag
Insert:	shRNA
Vector:	Lentiviral Vector
Application:	RNA Interference (RNAi)

Product Details

Purpose:Pre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-down of Human LOC653486.Brand:HuSH-29™Vector Backbone:pGFP-C-shLentiPromoter:U6 PromoterSelectable Marker:PuromycinBacterial Resistance:ChloramphenicolExpression Type:Transient, StableSpecificity:The HuSH shRNA gene-specific expression cassettes were optimized to include both the termination signal for RNA Pol III and GC content targeted at 50% to further improve the quality of the gene-specific shRNA expression vectors. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved.Characteristics:• The shRNA gene-specific expression cassettes are prepared using synthetic		
Brand:HuSH-29™Vector Backbone:pGFP-C-shLentiPromoter:U6 PromoterSelectable Marker:PuromycinBacterial Resistance:ChloramphenicolExpression Type:Transient, StableSpecificity:The HuSH shRNA gene-specific expression cassettes were optimized to include both the termination signal for RNA POI III and GC content targeted at 50% to further improve the quality of the gene-specific shRNA expression vectors. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved.	Purpose:	Pre-designed Hush-29 shRNAs in viral vectors with proven effectiveness for knock-down of
Vector Backbone:pGFP-C-shLentiPromoter:U6 PromoterSelectable Marker:PuromycinBacterial Resistance:ChloramphenicolExpression Type:Transient, StableSpecificity:• The HuSH shRNA gene-specific expression cassettes were optimized to include both the termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. • One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved.		Human LOC653486.
Promoter:U6 PromoterSelectable Marker:PuromycinBacterial Resistance:ChloramphenicolExpression Type:Transient, StableSpecificity:• The HuSH shRNA gene-specific expression cassettes were optimized to include both the termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. • One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved.	Brand:	HuSH-29™
Selectable Marker:PuromycinBacterial Resistance:ChloramphenicolExpression Type:Transient, StableSpecificity:• The HuSH shRNA gene-specific expression cassettes were optimized to include both the termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. • One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved.	Vector Backbone:	pGFP-C-shLenti
Bacterial Resistance:ChloramphenicolExpression Type:Transient, StableSpecificity:• The HuSH shRNA gene-specific expression cassettes were optimized to include both the termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. • One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved.	Promoter:	U6 Promoter
Expression Type:Transient, StableSpecificity:• The HuSH shRNA gene-specific expression cassettes were optimized to include both the termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors.• One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved.	Selectable Marker:	Puromycin
 Specificity: The HuSH shRNA gene-specific expression cassettes were optimized to include both the termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved. 	Bacterial Resistance:	Chloramphenicol
 termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors. One of the four constructs at minimum are guaranteed to produce 70 % or more gene expression knock-down provided a minimum transfection efficiency of 80 % is achieved. 	Expression Type:	Transient, Stable
expression knock-down provided a minimum transfection efficiency of 80 % is achieved.	Specificity:	termination signal for RNA Pol III and GC content targeted at 50 % to further improve the quality of the gene-specific shRNA expression vectors.
Characteristics: • The shRNA gene-specific expression cassettes are prepared using synthetic		
	Characteristics:	The shRNA gene-specific expression cassettes are prepared using synthetic

Product Details	
	 oligonucleotides. These oligonucleotide sequences were computer designed for optimal suppression of gene expression and minimal off-target effects. All shRNA sequences are verified through DNA sequencing analysis.
Components:	 Gene-specific shRNA in pGFPC-shLenti vector, 4 unique constructs per gene, 5 ug per vial. HuSH 29-mer Scrambled in pGFP-C-shLenti 5 ug plasmid DNA.
Target Details	
Gene:	SCGB1C2
Alternative Name:	LOC653486 (SCGB1C2 Products)
Application Details	
Application Notes:	 Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.
Restrictions:	For Research Use only
Handling	
Format:	Lyophilized
Storage:	4 °C/-20 °C
Storage Comment:	The dried plasmids can be stored at 4°C. However, once reconstituted with dH2O, the plasmids must be stored at -20°C.
