## **Human DCLK1 cDNA Clone in Bacterial Expression Vector (His-MBP)**

Quantity:       500 ng         Gene:       DCLK1         Species:       Human         Fusion tag:       His-MBP         Insert:       cDNA         Vector:       Bacterial Expression Vector         Application:       Cloning (Clon)         Product Details         Purpose:       Bacterial expression of Human DCLK1 with His-MBP         Insert Length:       2190 bp         Vector Backbone:       pPB-His-MBP         Promoter:       T7 Promoter         Bacterial Resistance:       Kanamycin         Expression Type:       Transient         Specificity:       5-Nhel and 3-Xhol	
Species: Human  Fusion tag: His-MBP  Insert: cDNA  Vector: Bacterial Expression Vector  Application: Cloning (Clon)  Product Details  Purpose: Bacterial expression of Human DCLK1 with His-MBP  Insert Length: 2190 bp  Vector Backbone: pPB-His-MBP  Promoter: T7 Promoter  Bacterial Resistance: Kanamycin  Expression Type: Transient	
Fusion tag: His-MBP  Insert: cDNA  Vector: Bacterial Expression Vector  Application: Cloning (Clon)  Product Details  Purpose: Bacterial expression of Human DCLK1 with His-MBP  Insert Length: 2190 bp  Vector Backbone: pPB-His-MBP  Promoter: T7 Promoter  Bacterial Resistance: Kanamycin  Expression Type: Transient	
Insert: cDNA  Vector: Bacterial Expression Vector  Application: Cloning (Clon)  Product Details  Purpose: Bacterial expression of Human DCLK1 with His-MBP  Insert Length: 2190 bp  Vector Backbone: pPB-His-MBP  Promoter: T7 Promoter  Bacterial Resistance: Kanamycin  Expression Type: Transient	
Vector:       Bacterial Expression Vector         Application:       Cloning (Clon)         Product Details         Purpose:       Bacterial expression of Human DCLK1 with His-MBP         Insert Length:       2190 bp         Vector Backbone:       pPB-His-MBP         Promoter:       T7 Promoter         Bacterial Resistance:       Kanamycin         Expression Type:       Transient	
Application: Cloning (Clon)  Product Details  Purpose: Bacterial expression of Human DCLK1 with His-MBP  Insert Length: 2190 bp  Vector Backbone: pPB-His-MBP  Promoter: T7 Promoter  Bacterial Resistance: Kanamycin  Expression Type: Transient	
Product Details  Purpose: Bacterial expression of Human DCLK1 with His-MBP  Insert Length: 2190 bp  Vector Backbone: pPB-His-MBP  Promoter: T7 Promoter  Bacterial Resistance: Kanamycin  Expression Type: Transient	
Purpose: Bacterial expression of Human DCLK1 with His-MBP  Insert Length: 2190 bp  Vector Backbone: pPB-His-MBP  Promoter: T7 Promoter  Bacterial Resistance: Kanamycin  Expression Type: Transient	
Insert Length: 2190 bp  Vector Backbone: pPB-His-MBP  Promoter: T7 Promoter  Bacterial Resistance: Kanamycin  Expression Type: Transient	
Vector Backbone:       pPB-His-MBP         Promoter:       T7 Promoter         Bacterial Resistance:       Kanamycin         Expression Type:       Transient	
Promoter: T7 Promoter  Bacterial Resistance: Kanamycin  Expression Type: Transient	
Bacterial Resistance: Kanamycin  Expression Type: Transient	
Expression Type: Transient	
Specificity: 5-Nhel and 3-Xhol	
Fusion tag: Dual N-terminal tag, 6X Histidine followed by Malto	ose Binding Protein which is
cleavable with Thrombin (Size 43 kDa)	
Sequencing Primer: MBP Forward primer: 5'-CGCAGATGTCCGCTTTCTGG-3', T7 to	rminator primer: 5'-
GCTAGTTATTGCTCAGCGG-3'	
Target Details	
Gene: DCLK1	

## **Target Details** DCLK1 (DCLK1 Products) Alternative Name: NCBI Accession: NM\_004734 **Application Details Application Notes:** The pPB vectors are low-medium copy number vectors in which the gene expression is driven by the strong T7 promoter. Below are some basic guidelines for using the pPB vectors for protein production: 1. The pPB vectors are designed to be used with E. coli strains that are DE3 lysogens i.e. the host E. coli cell has a source of T7 RNA polymerase. 2. Recombinant protein induction is usually done at OD600 of 0.6-1.2 using Isopropyl β-D-1thiogalactopyranoside (IPTG) at a final concentration of 0.05 -1mM. 3. The ideal concentration of IPTG must be determined empirically for each recombinant protein/cell-line. Similarly, the length of time and temperature for induction provide other variables that need to be optimized on a case-to-case basis. 4. For toxic proteins, it is recommended to go for shorter induction time and also to try and suppress basal recombinant gene expression through (a) addition of glucose or use of pLysS plasmid. Please note that special cell-lines are also available in the market that cater to expression of toxic proteins. 5. Once grown for the desired length of time, harvest cells by centrifugation and either freeze the cells at -80°C (as such or after re-suspending in the desired buffer) or proceed with the purification. Restrictions: For Research Use only Handling

Format:	Liquid
Buffer:	10 mM Tris-HCI, 1 mM EDTA, pH 8.0
Storage:	-20 °C
Storage Comment:	1 year when stored at -20° C or lower in a non-frost free freezer.
Expiry Date:	12 months
