Datasheet for ABIN4700853 Human DDB2 cDNA Clone in Bacterial Expression Vector (His-MBP)

Overview

Quantity:	500 ng
Gene:	DDB2
Species:	Human
Fusion tag:	His-MBP
Insert:	cDNA
Vector:	Bacterial Expression Vector
Application:	Cloning (Clon)

Product Details

Purpose:	Bacterial expression of Human DDB2 with His-MBP
Insert Length:	1284 bp
Vector Backbone:	pPB-His-MBP
Promoter:	T7 Promoter
Bacterial Resistance:	Kanamycin
Expression Type:	Transient
Specificity:	5-Nhel and 3-Xhol Fusion tag: Dual N-terminal tag, 6X Histidine followed by Maltose Binding Protein which is cleavable with Thrombin (Size 43 kDa)
Sequencing Primer:	MBP Forward primer: 5'-CGCAGATGTCCGCTTTCTGG-3', T7 terminator primer: 5'-GCTAGTTATTGCTCAGCGG-3'

Target Details

Gene:

Application Details Application Notes: The pPB vectors are low-medium copy number vectors in which the gene expression by the strong T7 promoter. Below are some basic guidelines for using the pPB vectors for protein production. 1. The pPB vectors are designed to be used with E. coli strains that are DE3 lysthost E. coli cell has a source of T7 RNA polymerase. 2. Recombinant protein induction is usually done at OD600 of 0.6-1.2 using lsothiogalactopyranoside (IPTG) at a final concentration of 0.05 -1mM. 3. The ideal concentration of IPTG must be determined empirically for each record protein/cell-line. Similarly, the length of time and temperature for induction provision variables that need to be optimized on a case-to-case basis.	DDB2 (DDB2 Products)

protein/cell-line. Similarly, the length of time and temperature for induction pro		
	combinant	
variables that need to be optimized on a case-to-case basis.	vide other	
4. For toxic proteins, it is recommended to go for shorter induction time and als	so to try and	
suppress basal recombinant gene expression through (a) addition of glucose c	or use of pLysS	
plasmid. Please note that special cell-lines are also available in the market that	cater to	
expression of toxic proteins.		
5. Once grown for the desired length of time, harvest cells by centrifugation and	d either freeze	
the cells at -80°C (as such or after re-suspending in the desired buffer) or proce	eed with the	
purification.		
Restrictions: For Research Use only

			\mathcal{I}

Target Details

Format:	Liquid
Buffer:	10 mM Tris-HCl, 1 mM EDTA, pH 8.0
Storage:	-20 °C
Storage Comment:	1 year when stored at -20° C or lower in a non-frost free freezer.
Expiry Date:	12 months
