Datasheet for ABIN4739520 Mouse USP27X cDNA Clone in Bacterial Expression Vector (His-MBP)

Overview	
Quantity:	500 ng
Gene:	USP27X
Species:	Mouse
Fusion tag:	His-MBP
Insert:	cDNA
Vector:	Bacterial Expression Vector
Application:	Cloning (Clon)

Product Details

Purpose:	Bacterial expression of Mouse Usp27x with His-MBP
Insert Length:	3240 bp
Vector Backbone:	pPB-His-MBP
Promoter:	T7 Promoter
Bacterial Resistance:	Kanamycin
Expression Type:	Transient
Specificity:	5-Nhel and 3-Xhol Fusion tag: Dual N-terminal tag, 6X Histidine followed by Maltose Binding Protein which is cleavable with Thrombin (Size 43 kDa)
Sequencing Primer:	MBP Forward primer: 5'-CGCAGATGTCCGCTTTCTGG-3', T7 terminator primer: 5'-GCTAGTTATTGCTCAGCGG-3'

Target Details

Gene:

USP27X

Target Details		
Alternative Name:	Usp27x (USP27X Products)	
NCBI Accession:	NM_019461	
Application Details		
Application Notes:	The pPB vectors are low-medium copy number vectors in which the gene expression is driven	
	by the strong T7 promoter.	
	Below are some basic guidelines for using the pPB vectors for protein production:	
	1. The pPB vectors are designed to be used with E. coli strains that are DE3 lysogens i.e. the	
	host E. coli cell has a source of T7 RNA polymerase.	
	2. Recombinant protein induction is usually done at OD600 of 0.6-1.2 using Isopropyl β -D-1-	
	thiogalactopyranoside (IPTG) at a final concentration of 0.05 -1mM.	
	3. The ideal concentration of IPTG must be determined empirically for each recombinant	
	protein/cell-line. Similarly, the length of time and temperature for induction provide other	
	variables that need to be optimized on a case-to-case basis.	
	4. For toxic proteins, it is recommended to go for shorter induction time and also to try and	
	suppress basal recombinant gene expression through (a) addition of glucose or use of pLysS	
	plasmid. Please note that special cell-lines are also available in the market that cater to	
	expression of toxic proteins.	
	5. Once grown for the desired length of time, harvest cells by centrifugation and either freeze	
	the cells at -80°C (as such or after re-suspending in the desired buffer) or proceed with the	
	purification.	
Restrictions:	For Research Use only	
Handling		
Format:	Liquid	
Buffer:	10 mM Tris-HCl, 1 mM EDTA, pH 8.0	
Storage:	-20 °C
