## Datasheet for ABIN4749235 Rat MST4 cDNA Clone in Bacterial Expression Vector (His-MBP)

#### Overview

Quantity:	500 ng
Gene:	STK26/MST4 (MST4)
Species:	Rat
Fusion tag:	His-MBP
Insert:	cDNA
Vector:	Bacterial Expression Vector
Application:	Cloning (Clon)

#### Product Details

Purpose:	Bacterial expression of Rat Mst4 with His-MBP
Insert Length:	1882 bp
Vector Backbone:	pPB-His-MBP
Promoter:	T7 Promoter
Bacterial Resistance:	Kanamycin
Expression Type:	Transient
Specificity:	5-Nhel and 3-Xhol Fusion tag: Dual N-terminal tag, 6X Histidine followed by Maltose Binding Protein which is cleavable with Thrombin (Size 43 kDa)
Sequencing Primer:	MBP Forward primer: 5'-CGCAGATGTCCGCTTTCTGG-3', T7 terminator primer: 5'- GCTAGTTATTGCTCAGCGG-3'

### Target Details

Gene:

STK26/MST4 (MST4)

Alternative Name:       Mst4 (MST4 Products)         NCBI Accession:       NM_001191736         Application Details       Application Notes:         The pPB vectors are low-medium copy number vectors in which the gene expression is dr by the strong T7 promoter.         Below are some basic guidelines for using the pPB vectors for protein production:         1. The pPB vectors are designed to be used with E. coli strains that are DE3 lysogens i.e. t host E. coli cell has a source of T7 RNA polymerase.         2. Recombinant protein induction is usually done at OD600 of 0.6-1.2 using Isopropyl β-D-thiogalactopyranoside (IPTG) at a final concentration of 0.05 -1mM.         3. The ideal concentration of IPTG must be determined empirically for each recombinant protein/cell-line. Similarly, the length of time and temperature for induction provide other variables that need to be optimized on a case-to-case basis.         4. For toxic proteins, it is recommended to go for shorter induction time and also to try an suppress basal recombinant gene expression through (a) addition of glucose or use of pL plasmid. Please note that special cell-lines are also available in the market that cater to expression of toxic proteins.         5. Once grown for the desired length of time, harvest cells by centrifugation and either free the cells at -80°C (as such or after re-suspending in the desired buffer) or proceed with the purification.         Restrictions:       For Research Use only

the cells at -80°C (as such or after re-suspending in the desired buffer) or proceed with the purification.
purification.
Restrictions: For Research Use only
Handling
Format: Liquid
Buffer: 10 mM Tris-HCl, 1 mM EDTA, pH 8.0
Storage: -20 °C
Storage Comment: 1 year when stored at -20° C or lower in a non-frost free freezer.
Expiry Date: 12 months
