## Datasheet for ABIN4755795 Rat TAS2R104 cDNA Clone in Bacterial Expression Vector (His-MBP)

#### Overview

Quantity:	500 ng
Gene:	TAS2R104
Species:	Rat
Fusion tag:	His-MBP
Insert:	cDNA
Vector:	Bacterial Expression Vector
Application:	Cloning (Clon)

#### Product Details

Purpose:	Bacterial expression of Rat Tas2r104 with His-MBP
Insert Length:	909 bp
Vector Backbone:	pPB-His-MBP
Promoter:	T7 Promoter
Bacterial Resistance:	Kanamycin
Expression Type:	Transient
Specificity:	5-Nhel and 3-Xhol Fusion tag: Dual N-terminal tag, 6X Histidine followed by Maltose Binding Protein which is cleavable with Thrombin (Size 43 kDa)
Sequencing Primer:	MBP Forward primer: 5'-CGCAGATGTCCGCTTTCTGG-3', T7 terminator primer: 5'-GCTAGTTATTGCTCAGCGG-3'

### Target Details

Gene:

TAS2R104

Alternative Name:       Tas2r104         NCBI Accession:       NM_001166681         Application Details       Application Details         Application Notes:       The pPB vectors are low-medium copy number vectors in which the gene expression by the strong T7 promoter. Below are some basic guidelines for using the pPB vectors for protein production:         1. The pPB vectors are designed to be used with E. coli strains that are DE3 lysogen: host E. coli cell has a source of T7 RNA polymerase.       2. Recombinant protein induction is usually done at 0D600 of 0.6-1.2 using Isopropy thiogalactopyranoside (IPTG) at a final concentration of 0.05 -1mM.         3. The ideal concentration of IPTG must be determined empirically for each recombi protein/cell-line. Similarly, the length of time and temperature for induction provide c variables that need to be optimized on a case-to-case basis.       4. For toxic proteins, it is recommended to go for shorter induction time and also to suppress basal recombinant gene expression through (a) addition of glucose or use plasmid. Please note that special cell-lines are also available in the market that categories expression of toxic proteins.         5. Once grown for the desired length of time, harvest cells by centrifugation and eith the cells at -80°C (as such or after re-suspending in the desired buffer) or proceed with the cells at -80°C (as such or after re-suspending in the desired buffer) or proceed with the cells at -80°C (as such or after re-suspending in the desired buffer) or proceed with the cells at -80°C (as such or after re-suspending in the desired buffer) or proceed with the cells at -80°C (as such or after re-suspending in the desired buffer) or proceed with the cells at -80°C (as such or after re-suspending in the desire	s i.e. the

	vith the
purification.	
Restrictions: For Research Use only	
Handling	
Format: Liquid	
Buffer: 10 mM Tris-HCl, 1 mM EDTA, pH 8.0	
Storage: -20 °C	
Storage Comment: 1 year when stored at -20° C or lower in a non-frost free freezer.	
Expiry Date: 12 months
