## Datasheet for ABIN4827239 Human BEX2 cDNA Clone in Bacterial Expression Vector (His-GST)

#### Overview

Quantity:	500 ng
Quantity.	500 Hg
Gene:	BEX2
Species:	Human
Fusion tag:	His-GST
Insert:	cDNA
Vector:	Bacterial Expression Vector
Application:	Cloning (Clon)

#### Product Details

Purpose:Bacterial expression of Human BEX2 with His-GSTInsert Length:387 bpVector Backbone:pPB-His-GSTPromoter:T7 PromoterBacterial Resistance:KanamycinExpression Type:TransientSpecificity:5-Nhel and 3-Xhol Fusion tag: Dual N-terminal tag, 6X Histidine followed by Glutathione-S-Transferase Protein which is cleavable with TEV (Size 27.9 kDa)Sequencing Primer:GST Forward primer: 5'-CACGTTTGGTGGTGGCGAC3', T7 terminator primer: 5'- GCTAGTTATTGCTCAGCGG-3'		
Vector Backbone:pPB-His-GSTPromoter:T7 PromoterBacterial Resistance:KanamycinExpression Type:TransientSpecificity:5-Nhel and 3-Xhol Fusion tag: Dual N-terminal tag, 6X Histidine followed by Glutathione-S-Transferase Protein which is cleavable with TEV (Size 27.9 kDa)Sequencing Prime:GST Forward prime: 5'-CACGTTTGGTGGTGGCGAC3', T7 terminator prime: 5'-	Purpose:	Bacterial expression of Human BEX2 with His-GST
Promoter:T7 PromoterBacterial Resistance:KanamycinExpression Type:TransientSpecificity:5-Nhel and 3-Xhol Fusion tag: Dual N-terminal tag, 6X Histidine followed by Glutathione-S-Transferase Protein which is cleavable with TEV (Size 27.9 kDa)Sequencing Primer:GST Forward primer: 5'-CACGTTTGGTGGTGGCGAC3', T7 terminator primer: 5'-	Insert Length:	387 bp
Bacterial Resistance:KanamycinExpression Type:TransientSpecificity:5-Nhel and 3-Xhol Fusion tag: Dual N-terminal tag, 6X Histidine followed by Glutathione-S-Transferase Protein which is cleavable with TEV (Size 27.9 kDa)Sequencing Primer:GST Forward primer: 5'-CACGTTTGGTGGTGGCGAC3', T7 terminator primer: 5'-	Vector Backbone:	pPB-His-GST
Expression Type:TransientSpecificity:5-Nhel and 3-Xhol Fusion tag: Dual N-terminal tag, 6X Histidine followed by Glutathione-S-Transferase Protein which is cleavable with TEV (Size 27.9 kDa)Sequencing Primer:GST Forward primer: 5'-CACGTTTGGTGGTGGCGAC3', T7 terminator primer: 5'-	Promoter:	T7 Promoter
Specificity:5-Nhel and 3-XholFusion tag: Dual N-terminal tag, 6X Histidine followed by Glutathione-S-Transferase Protein which is cleavable with TEV (Size 27.9 kDa)Sequencing Primer:GST Forward primer: 5'-CACGTTTGGTGGCGAC3', T7 terminator primer: 5'-	Bacterial Resistance:	Kanamycin
Fusion tag: Dual N-terminal tag, 6X Histidine followed by Glutathione-S-Transferase Protein which is cleavable with TEV (Size 27.9 kDa)   Sequencing Primer: GST Forward primer: 5'-CACGTTTGGTGGTGGCGAC3', T7 terminator primer: 5'-	Expression Type:	Transient
	Specificity:	Fusion tag: Dual N-terminal tag, 6X Histidine followed by Glutathione-S-Transferase Protein
	Sequencing Primer:	

### Target Details

Gene:

The pPB vectors are low-medium copy number vectors in which the gene expression is driver by the strong T7 promoter. Below are some basic guidelines for using the pPB vectors for protein production: 1. The pPB vectors are designed to be used with E. coli strains that are DE3 lysogens i.e. the host E. coli cell has a source of T7 RNA polymerase. 2. Recombinant protein induction is usually done at OD600 of 0.6-1.2 using Isopropyl β-D-1- thiogalactopyranoside (IPTG) at a final concentration of 0.05 -1mM.
by the strong T7 promoter. Below are some basic guidelines for using the pPB vectors for protein production: 1. 1. The pPB vectors are designed to be used with E. coli strains that are DE3 lysogens i.e. the host E. coli cell has a source of T7 RNA polymerase. 2. Recombinant protein induction is usually done at OD600 of 0.6-1.2 using Isopropyl $\beta$ -D-1- thiogalactopyranoside (IPTG) at a final concentration of 0.05 -1mM.
host E. coli cell has a source of T7 RNA polymerase. 2. Recombinant protein induction is usually done at OD600 of 0.6-1.2 using Isopropyl β-D-1- thiogalactopyranoside (IPTG) at a final concentration of 0.05 -1mM.
2. Recombinant protein induction is usually done at OD600 of 0.6-1.2 using Isopropyl β-D-1- thiogalactopyranoside (IPTG) at a final concentration of 0.05 -1mM.
thiogalactopyranoside (IPTG) at a final concentration of 0.05 -1mM.
3. The ideal concentration of IPTG must be determined empirically for each recombinant
protein/cell-line. Similarly, the length of time and temperature for induction provide other
variables that need to be optimized on a case-to-case basis.
4. For toxic proteins, it is recommended to go for shorter induction time and also to try and
suppress basal recombinant gene expression through (a) addition of glucose or use of pLysS
plasmid. Please note that special cell-lines are also available in the market that cater to
expression of toxic proteins.
5. Once grown for the desired length of time, harvest cells by centrifugation and either freeze
the cells at -80°C (as such or after re-suspending in the desired buffer) or proceed with the
purification.
For Research Use only

## Handling

Target Details

Format:	Liquid
Buffer:	10 mM Tris-HCI, 1 mM EDTA, pH 8.0
Storage:	-20 °C
Storage Comment:	1 year when stored at -20° C or lower in a non-frost free freezer.
Expiry Date:	12 months
Publications
