Datasheet for ABIN4843333

Human XCL1 cDNA Clone in Bacterial Expression Vector (His-GST)

Quantity: 500 ng Gene: XCL1 Species: Human Fusion tag: His-GST Insert: cDNA Vector: Bacterial Expression Vector Application: Cloning (Clon) Product Details Purpose: Bacterial expression of Human XCL1 with His-GST Insert Length: 345 bp Vector Backbone: pPB-His-GST Promoter: T7 Promoter Bacterial Resistance: Kanamycin Expression Type: Transient Specificity: 5-Nhel and 3-Xhol Fusion tag: Dual N-terminal tag, 6X Histidine followed by Glutathione-S-	
Species: Human Fusion tag: His-GST Insert: cDNA Vector: Bacterial Expression Vector Application: Cloning (Clon) Product Details Purpose: Purpose: Bacterial expression of Human XCL1 with His-GST Insert Length: 345 bp Vector Backbone: pPB-His-GST Promoter: T7 Promoter Bacterial Resistance: Kanamycin Expression Type: Transient Specificity: 5-Nhel and 3-Xhol	
Fusion tag: His-GST Insert: cDNA Vector: Bacterial Expression Vector Application: Cloning (Clon) Product Details Purpose: Bacterial expression of Human XCL1 with His-GST Insert Length: 345 bp Vector Backbone: pPB-His-GST Promoter: T7 Promoter Bacterial Resistance: Kanamycin Expression Type: Transient Specificity: 5-Nhel and 3-Xhol	
Insert: cDNA Vector: Bacterial Expression Vector Application: Cloning (Clon) Product Details Purpose: Bacterial expression of Human XCL1 with His-GST Insert Length: 345 bp Vector Backbone: pPB-His-GST Promoter: T7 Promoter Bacterial Resistance: Kanamycin Expression Type: Transient Specificity: 5-Nhel and 3-Xhol	
Vector: Bacterial Expression Vector Application: Cloning (Clon) Product Details Purpose: Bacterial expression of Human XCL1 with His-GST Insert Length: 345 bp Vector Backbone: pPB-His-GST Promoter: T7 Promoter Bacterial Resistance: Kanamycin Expression Type: Transient Specificity: 5-Nhel and 3-Xhol	
Application: Cloning (Clon) Product Details Purpose: Bacterial expression of Human XCL1 with His-GST Insert Length: 345 bp Vector Backbone: pPB-His-GST Promoter: T7 Promoter Bacterial Resistance: Kanamycin Expression Type: Transient Specificity: 5-Nhel and 3-Xhol	
Purpose: Bacterial expression of Human XCL1 with His-GST Insert Length: 345 bp Vector Backbone: pPB-His-GST Promoter: T7 Promoter Bacterial Resistance: Kanamycin Expression Type: Transient Specificity: 5-Nhel and 3-Xhol	
Purpose: Bacterial expression of Human XCL1 with His-GST Insert Length: 345 bp Vector Backbone: pPB-His-GST Promoter: T7 Promoter Bacterial Resistance: Kanamycin Expression Type: Transient Specificity: 5-Nhel and 3-Xhol	
Insert Length: 345 bp Vector Backbone: pPB-His-GST Promoter: T7 Promoter Bacterial Resistance: Kanamycin Expression Type: Transient Specificity: 5-Nhel and 3-Xhol	
Vector Backbone:pPB-His-GSTPromoter:T7 PromoterBacterial Resistance:KanamycinExpression Type:TransientSpecificity:5-Nhel and 3-Xhol	
Promoter: T7 Promoter Bacterial Resistance: Kanamycin Expression Type: Transient Specificity: 5-Nhel and 3-Xhol	
Bacterial Resistance: Kanamycin Expression Type: Transient Specificity: 5-Nhel and 3-Xhol	
Expression Type: Transient Specificity: 5-Nhel and 3-Xhol	
Specificity: 5-Nhel and 3-Xhol	
Fusion tag: Dual N-terminal tag, 6X Histidine followed by Glutathione-S-	
	Fransferase Protein
which is cleavable with TEV (Size 27.9 kDa)	
Sequencing Primer: GST Forward primer: 5'-CACGTTTGGTGGCGAC3', T7 terminator pri	mer: 5'-
GCTAGTTATTGCTCAGCGG-3'	
Target Details	
Gene: XCL1	

Alternative Name:

XCL1 (XCL1 Products)

Application Details

Application Notes:

The pPB vectors are low-medium copy number vectors in which the gene expression is driven by the strong T7 promoter.

Below are some basic guidelines for using the pPB vectors for protein production:

- 1. The pPB vectors are designed to be used with E. coli strains that are DE3 lysogens i.e. the host E. coli cell has a source of T7 RNA polymerase.
- 2. Recombinant protein induction is usually done at OD600 of 0.6-1.2 using Isopropyl β -D-1-thiogalactopyranoside (IPTG) at a final concentration of 0.05 -1mM.
- 3. The ideal concentration of IPTG must be determined empirically for each recombinant protein/cell-line. Similarly, the length of time and temperature for induction provide other variables that need to be optimized on a case-to-case basis.
- 4. For toxic proteins, it is recommended to go for shorter induction time and also to try and suppress basal recombinant gene expression through (a) addition of glucose or use of pLysS plasmid. Please note that special cell-lines are also available in the market that cater to expression of toxic proteins.
- 5. Once grown for the desired length of time, harvest cells by centrifugation and either freeze the cells at -80°C (as such or after re-suspending in the desired buffer) or proceed with the purification.

Restrictions:

For Research Use only

Handling

Format:	Liquid
Buffer:	10 mM Tris-HCl, 1 mM EDTA, pH 8.0
Storage:	-20 °C
Storage Comment:	1 year when stored at -20° C or lower in a non-frost free freezer.
Expiry Date:	12 months
