# Datasheet for ABIN4844022 Human ZNF630 cDNA Clone in Bacterial Expression Vector (His-GST)

#### Overview

Quantity:	500 ng
Gene:	ZNF630
Species:	Human
Fusion tag:	His-GST
Insert:	cDNA
Vector:	Bacterial Expression Vector
Application:	Cloning (Clon)

#### Product Details

Purpose:	Bacterial expression of Human ZNF630 with His-GST
Insert Length:	1974 bp
Vector Backbone:	pPB-His-GST
Promoter:	T7 Promoter
Bacterial Resistance:	Kanamycin
Expression Type:	Transient
Specificity:	5-Nhel and 3-Xhol Fusion tag: Dual N-terminal tag, 6X Histidine followed by Glutathione-S-Transferase Protein which is cleavable with TEV (Size 27.9 kDa)
Sequencing Primer:	GST Forward primer: 5'-CACGTTTGGTGGTGGCGAC3', T7 terminator primer: 5'-GCTAGTTATTGCTCAGCGG-3'

## Target Details

Gene:

ZNF630

Alternative Name:       ZNF630 (ZNF630 Products)         NCBI Accession:       NM_001037735         Application Details       Application Details         Application Notes:       The pPB vectors are low-medium copy number vectors in which the gene expression is driby the strong T7 promoter. Below are some basic guidelines for using the pPB vectors for protein production:         1. The pPB vectors are designed to be used with E. coli strains that are DE3 lysogens i.e. the host E. coli cell has a source of T7 RNA polymerase.         2. Recombinant protein induction is usually done at OD600 of 0.6-1.2 using Isopropyl β-D-thiogalactopyranoside (IPTG) at a final concentration of 0.05 -1mM.         3. The ideal concentration of IPTG must be determined empirically for each recombinant protein/cell-line. Similarly, the length of time and temperature for induction provide other variables that need to be optimized on a case-to-case basis.         4. For toxic proteins, it is recommended to go for shorter induction time and also to try and suppress basal recombinant gene expression through (a) addition of glucose or use of pLy plasmid. Please note that special cell-lines are also available in the market that cater to expression of toxic proteins.

expression of toxic proteins.
5. Once grown for the desired length of time, harvest cells by centrifugation and either free
the cells at -80°C (as such or after re-suspending in the desired buffer) or proceed with the
purification.
Restrictions: For Research Use only
Handling
Format: Liquid
Buffer: 10 mM Tris-HCl, 1 mM EDTA, pH 8.0
Storage: -20 °C
