## Datasheet for ABIN4844914 Mouse 4921539E11RIK cDNA Clone in Bacterial Expression Vector (His-GST)

#### Overview

Quantity:	500 ng
Gene:	4921539E11RIK
Species:	Mouse
Fusion tag:	His-GST
Insert:	cDNA
Vector:	Bacterial Expression Vector
Application:	Cloning (Clon)

#### Product Details

Purpose:	Bacterial expression of Mouse 4921539E11Rik with His-GST
Insert Length:	2356 bp
Vector Backbone:	pPB-His-GST
Promoter:	T7 Promoter
Bacterial Resistance:	Kanamycin
Expression Type:	Transient
Specificity:	5-Nhel and 3-Xhol Fusion tag: Dual N-terminal tag, 6X Histidine followed by Glutathione-S-Transferase Protein which is cleavable with TEV (Size 27.9 kDa)
Sequencing Primer:	GST Forward primer: 5'-CACGTTTGGTGGTGGCGAC3', T7 terminator primer: 5'-GCTAGTTATTGCTCAGCGG-3'

### Target Details

Gene:

4921539E11RIK

Alternative Name: 4921539E11Rik   NCBI Accession: NM_001163494   Application Details Application Details   Application Notes: The pPB vectors are low-medium copy number vectors in which the gene expression is by the strong T7 promoter.   Below are some basic guidelines for using the pPB vectors for protein production: 1. The pPB vectors are designed to be used with E. coli strains that are DE3 lysogens i.e host E. coli cell has a source of T7 RNA polymerase.   2. Recombinant protein induction is usually done at OD600 of 0.6-1.2 using Isopropyl β-

host E. coli cell has a source of T7 RNA polymerase.	
	the
2. Recombinant protein induction is usually done at OD600 of 0.6-1.2 using Isopropyl B-	
	D-1-
thiogalactopyranoside (IPTG) at a final concentration of 0.05 -1mM.	
3. The ideal concentration of IPTG must be determined empirically for each recombinan	t
protein/cell-line. Similarly, the length of time and temperature for induction provide othe	ſ
variables that need to be optimized on a case-to-case basis.	
4. For toxic proteins, it is recommended to go for shorter induction time and also to try a	ind
suppress basal recombinant gene expression through (a) addition of glucose or use of p	bLysS
plasmid. Please note that special cell-lines are also available in the market that cater to	
expression of toxic proteins.	
5. Once grown for the desired length of time, harvest cells by centrifugation and either fr	eeze
the cells at -80°C (as such or after re-suspending in the desired buffer) or proceed with t	he
purification.	
Restrictions: For Research Use only	
Handling	
Format: Liquid	
Buffer: 10 mM Tris-HCl, 1 mM EDTA, pH 8.0	
Storage: -20 °C	

Johnson, Drugan, Miller, Evans: "38" in: , Vol. 1363, Issue Nucleic acids research, pp. 28-39, (

1 year when stored at -20° C or lower in a non-frost free freezer.
