Datasheet for ABIN4861119 Mouse PC cDNA Clone in Bacterial Expression Vector (His-GST)

Overview

Quantity:	500 ng
Gene:	PC
Species:	Mouse
Fusion tag:	His-GST
Insert:	cDNA
Vector:	Bacterial Expression Vector
Application:	Cloning (Clon)

Product Details

Purpose:	Bacterial expression of Mouse Pcx with His-GST
Insert Length:	4125 bp
Vector Backbone:	pPB-His-GST
Promoter:	T7 Promoter
Bacterial Resistance:	Kanamycin
Expression Type:	Transient
Specificity:	5-Nhel and 3-Xhol Fusion tag: Dual N-terminal tag, 6X Histidine followed by Glutathione-S-Transferase Protein which is cleavable with TEV (Size 27.9 kDa)
Sequencing Primer:	GST Forward primer: 5'-CACGTTTGGTGGTGGCGAC3', T7 terminator primer: 5'- GCTAGTTATTGCTCAGCGG-3'

Target Details

e e e e e e e e e e e e e e e e e e e	
Gene:	PC

Alternative Name: Pcx (PC Products) NCBI Accession: NM_008797 Application Details Image: Comparison of the pPB vectors are low-medium copy number vectors in which the gene expression by the strong T7 promoter. Below are some basic guidelines for using the pPB vectors for protein production: 1. The pPB vectors are designed to be used with E. coli strains that are DE3 lysogens i host E. coli cell has a source of T7 RNA polymerase. 2. Recombinant protein induction is usually done at 0D600 of 0.6-1.2 using Isopropyl thiogalactopyranoside (IPTG) at a final concentration of 0.05 -1mM. 3. The ideal concentration of IPTG must be determined empirically for each recombin protein/cell-line. Similarly, the length of time and temperature for induction provide ot variables that need to be optimized on a case-to-case basis. 4. For toxic proteins, it is recommended to go for shorter induction time and also to tr suppress basal recombinant gene expression through (a) addition of glucose or use or plasmid. Please note that special cell-lines are also available in the market that cater t expression of toxic proteins.	
Application Details Application Notes: The pPB vectors are low-medium copy number vectors in which the gene expression by the strong T7 promoter. Below are some basic guidelines for using the pPB vectors for protein production: 1. The pPB vectors are designed to be used with E. coli strains that are DE3 lysogens in host E. coli cell has a source of T7 RNA polymerase. 2. Recombinant protein induction is usually done at OD600 of 0.6-1.2 using Isopropyl thiogalactopyranoside (IPTG) at a final concentration of 0.05 -1mM. 3. The ideal concentration of IPTG must be determined empirically for each recombin protein/cell-line. 5. Once grown for the desired length of time, harvest cells by centrifugation and either	freeze
the cells at -80°C (as such or after re-suspending in the desired buffer) or proceed with	n the
purification.	
Restrictions: For Research Use only	
Handling	
Format: Liquid	
Buffer: 10 mM Tris-HCI, 1 mM EDTA, pH 8.0	
Storage: -20 °C	
Storage Comment: 1 year when stored at -20° C or lower in a non-frost free freezer.	
Expiry Date: 12 months
