Specificity:	ORF Insert Method: CloneEZ® Seamless cloning technology, recombination-based cloning
	technology
Characteristics:	Gene cDNA ORF clone sequences were retrieved from the NCBI Reference Sequence Database
	(RefSeq). These sequences represent the protein coding region of the gene cDNA ORF which is
	encoded by the open reading frame (ORF) sequence.
Sequencing Primer:	Forward primer: 5'-TAATACGACTCACTATAGGG-3'
	Reverse primer: 5'-CCTCGACTGTGCCTTCTA-3'
Grade:	End-sequenced
Components:	The GenEZ ORF clone is delivered as 10 μg of lyophilized plasmid DNA in a vial.

Target Details

Gene:	DPRX
Alternative Name:	DPRX (DPRX Products)
Background:	Homeobox genes encode DNA-binding proteins, many of which are thought to be involved in
	early embryonic development. Homeobox genes encode a DNA-binding domain of 60 to 63
	amino acids referred to as the homeodomain. This gene is a member of the DPRX homeobox
	gene family. Evidence of mRNA expression has not yet been found for this gene. Multiple,
	related processed pseudogenes have been found which are thought to reflect expression of
	this gene in the germ line or embryonic cells. [provided by RefSeq, Jul 2008].
Gene ID:	503834
NCBI Accession:	NM_001012728

Application Details

Restrictions:

For Research Use only

Handling

Format:	Lyophilized
Storage:	RT/-20 °C
Storage Comment:	 Keep the vial sealed and store at -20°C for long-term storage. Before use, centrifuge the vial at 6,000 g x g for 1 minute at 4°C. Open the lid and add 100 µl (or other volume depending on your desired final concentration) of distilled water (or TE buffer) to dissolve the DNA. If necessary, heat the solution at 50°C for 15 minutes to dissolve the DNA. Close the lid and vortex the vial for 1 minute. Aliquot the dissolved plasmid DNA and store in small aliquots at -20°C.
Expiry Date:	12 months
