## Human LINC00527 CRISPR gRNA + Cas9 in Lenti Particles

| Overview              |                                                                                                                                                                                            |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Quantity:             | 3 x 300 μL                                                                                                                                                                                 |
| Gene:                 | C21orf104 (LINC00527)                                                                                                                                                                      |
| Species:              | Human                                                                                                                                                                                      |
| Insert:               | gRNA + Cas9                                                                                                                                                                                |
| Vector:               | Lentiviral Vector                                                                                                                                                                          |
| Application:          | Genome Editing with Engineered Nucleases (GEEN), Protein Expression (PExp)                                                                                                                 |
| Product Details       |                                                                                                                                                                                            |
| Purpose:              | Set of 3 gRNA against C21orf104 in Lentiviral Particles with a Titer of >1x10e7 IU/mL. (sgRNA and Cas9 in a single vector)                                                                 |
| Vector Backbone:      | pLenti-U6-sgRNA-SFFV-Cas9-2A-Puro                                                                                                                                                          |
| Promoter:             | U6 Promoter, SFFV Promoter                                                                                                                                                                 |
| Selectable Marker:    | Puromycin                                                                                                                                                                                  |
| Bacterial Resistance: | Ampicillin                                                                                                                                                                                 |
| Expression Type:      | Stable, Transient                                                                                                                                                                          |
| Sequence:             | Sequence available upon placing order                                                                                                                                                      |
| Specificity:          | GRNAs are designed for use with Cas9 Nuclease only.  Cas9 Nuclease is under the control of the SFFV promoter which should work for a vast majority of cells, except ES cells or iPS cells. |
| Sequencing Primer:    | U6 Forward Primer: 5'TACGTCCAAGGTCGGGCAGGAAGA3'                                                                                                                                            |
| Components:           | Lentiviral particles with a set of 3 gRNAs (3 x 300 $\mu$ L) covering different sequences of C21orf104                                                                                     |

## **Target Details** C21orf104 (LINC00527) Gene: Alternative Name: C21orf104 **Application Details** Application Notes: Recommended for quality control: Restriction Enzyme Digest and Sequencing Restrictions: For Research Use only Handling Format: Viral Particles -80 °C Storage: Expiry Date: 12 months
