Gene: LPO

Abstract: [LPO Products](#)

Background: This gene encodes a member of the peroxidase family of proteins. The encoded preprotein is proteolytically processed to generate the mature enzyme. Following its secretion from salivary, mammary, and other mucosal glands, this enzyme catalyzes the generation of the antimicrobial substance hypothiocyanous acid. This gene is present in a gene cluster on chromosome 17. Alternative splicing results in multiple transcript variants, at least one of which encodes a preprotein that is proteolytically processed.
