Target Details

Gene:	CGB7
Abstract:	CGB7 Products
Background:	This gene is a member of the glycoprotein hormone beta chain family and encodes the beta 7
	subunit of chorionic gonadotropin (CG). Glycoprotein hormones are heterodimers consisting of
	a common alpha subunit and an unique beta subunit which confers biological specificity. CG is
	produced by the trophoblastic cells of the placenta and stimulates the ovaries to synthesize the
	steroids that are essential for the maintenance of pregnancy. The beta subunit of CG is
	encoded by 6 genes which are arranged in tandem and inverted pairs on chromosome 19q13.3
	and contiguous with the luteinizing hormone beta subunit gene.
