Target Details

Gene:	SSX7
Abstract:	SSX7 Products
Background:	The product of this gene belongs to the family of highly homologous synovial sarcoma X (SSX)
	breakpoint proteins. These proteins may function as transcriptional repressors. They are also
	capable of eliciting spontaneously humoral and cellular immune responses in cancer patients,
	and are potentially useful targets in cancer vaccine-based immunotherapy. SSX1, SSX2 and
	SSX4 genes have been involved in the t(X,18) translocation characteristically found in all
	synovial sarcomas. This gene appears not to be involved in this type of chromosome
	translocation.
