## Human EBLN2 ORF Clone in Lentiviral Vector (GFP tag)

### Overview

Quantity:	10 µg
Gene:	EBLN2
Species:	Human
Fusion tag:	GFP tag
Insert:	ORF
Vector:	Lentiviral Vector
Application:	Protein Expression (PEXP)

### Product Details

Purpose:	Lentiviral Vector with ORF clone of Human endogenous Bornavirus-like N element-2 (EBLN2), C-term GFP tagged
Brand:	LentiORF
Insert Length:	819 bp
Vector Backbone:	pLenti-C-mGFP
Promoter:	CMV Promoter
Bacterial Resistance:	Chloramphenicol
Expression Type:	Transient
Specificity:	Restriction Site: SgfI-MluI
Characteristics:	<p>mGFP tagged, C-terminal</p> <p>Broad cell spectrum: Lentivirus infect most cells, dividing &amp; non-dividing, easy-to-transfect &amp; hard-to-transfect cells.</p> <p>High transduction efficiency</p> <p>Convenience: Minimal need for optimization.</p>

## Product Details

---

Safety: 3rd generation system with improved biosafety.

---

Components: 10 µg of lyophilized plasmid

---

## Target Details

---

Gene: EBLN2

---

Alternative Name: endogenous Borina-like N element-2 (EBLN2) ([EBLN2 Products](#))

---

Background: May act as an RNA-binding protein. The C-terminal region is highly homologous to the bornavirus nucleocapsid N protein that binds viral RNA and oligomerizes. The viral protein also possesses a nuclear import and a nuclear export signal. These 2 signals seem absent in EBLN-2 supporting an unrelated function in Human. [UniProtKB/Swiss-Prot Function]

---

NCBI Accession: [NM\\_018029](#), [NP\\_060499](#)

---

## Application Details

---

Application Notes: Ideal For Tracking the over-expressed protein in tranfected cells

---

Restrictions: For Research Use only

---

## Handling

---

Format: Lyophilized

---

Storage: 4 °C/-20 °C

---

## Publications

---
